

The publications analyzed in this section are those listed in SIGAPS (journal article, review, letter, editorial, commentary, congress or other), including publications for which CJP members are only present in the list of investigators).

The following graphs show how this activity has evolved since 2000.

Figure 1: Evolution on the number of publications (horizontal line: average).

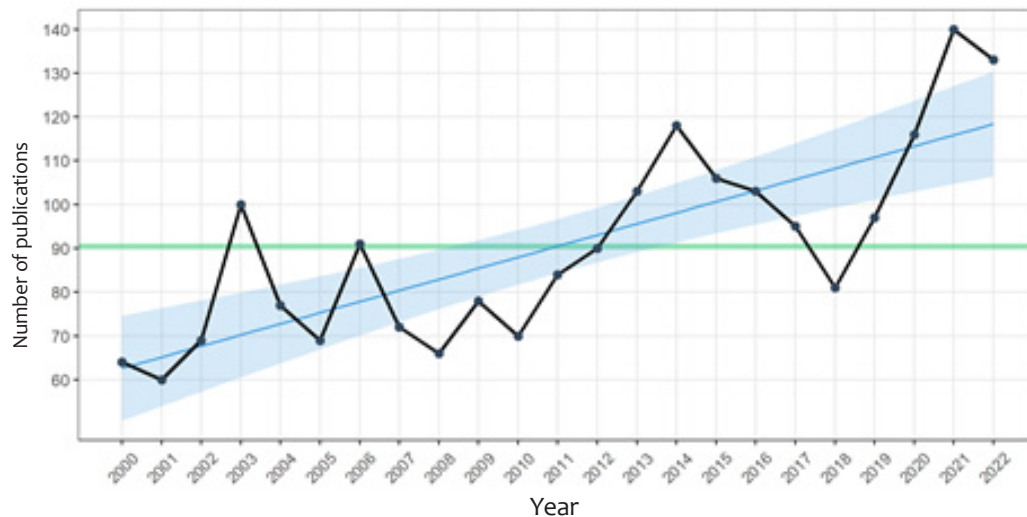

Figure 1 shows the evolution of the number of publications: on the rise since 2018, reaching a maximum of 140 in 2021, and 133 in 2022 (the selected SIGAPS criteria explain the difference in the number of publications reported in the first chapter).

Figure 2 shows the evolution of the average Impact Factor (IF) of these publications: still rising since 2018, it expects a maximum of 15.3 in 2022, with a general upward trend since 2000.

Figure 2: Annual evolution of average impact factor of publications (horizontal line = average).
